

Journal of Applied Educational Technology

The Journal of Applied Educational Technology (JAET) serves an audience of teachers, professors, and educational administrators who deal with technology in the K-20 environment. It seeks to offer solutions for educators through the use of applied technology as well as providing a publishing platform for current research.

The journal publishes articles focusing on classroom uses of technology and research in the field. Research articles are subjected to blind peer review before acceptance for publication. The journal is available free of charge as a series of electronic PDF documents. These PDF versions of articles may be freely disseminated electronically as long as they remain unchanged. Use of JAET articles in print publications released by K-20 institutions for the specific use of students and teachers is allowed by written request so long as the articles are included in full and credit is given to the journal and author(s) and publication does not serve a profit-making purpose. All other reproduction rights, including electronic storage for commercial use, are reserved.
